Factory Triple Clamp

Factory Triple Clamp

By working closely with WP, the stiffness of the Factory Triple Clamp was precisely configured for the WP fork. Testing of the clamp was completed in combination with WP Fork Legs using data collected from some of the toughest motocross races on the planet, over greatly extended times. This set-up is the best link between the WP Fork and the lightweight, high-tech steel frame. No other triple clamp on the market has been specially developed for this championship winning duo.

By optimising the clamping of the fork, ovalisation of the outer fork tube is removed compared to series clamps and aftermarket competitors. In doing so, internal friction is reduced, keeping temperatures down which maintains a constant damping effect. For the rider this means a smooth and precise response from the suspension.

For 2020, Rockstar Energy Husqvarna Factory Racing motorcycles, across both Motocross and Enduro disciplines, will be intensified with the Factory Triple Clamp starting in January with the opening of the AMA Super-cross Championship - a clear statement of the performance gained by using Husqvarna Accessories.

2620199902168 / blue / for Motocross models

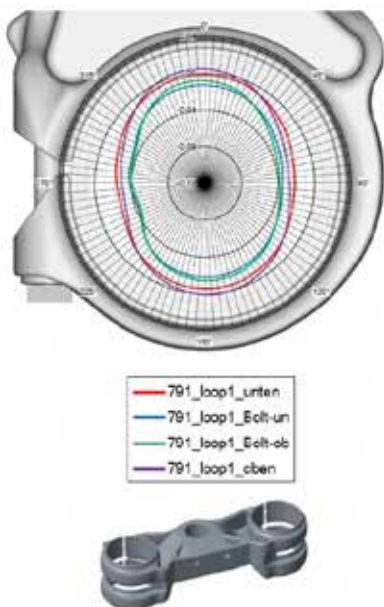

7970199902168A / blue / for Enduro models

79101999021C1A / black / for Motocross models

Features

- ⊕ Made from high-grade aluminium
- ⊕ Optimal steering stem stiffness
- ⊕ Optimised fork tube alignment
- ⊕ Ideal flexibility – precisely engineered for WP forks
- ⊕ Optimised fork clamp geometry
Perfect clamping of fork outer tube
- ⊕ Smooth and precise fork action
- ⊕ Maximum handling gains for improved front wheel stability and overall handling advances
- ⊕ Simple offset adjustment from 20 to 22 mm
Shorter offset: Stability on fast straights
Longer offset: easier and quicker cornering
- ⊕ Including steering stem with steering head bearing already pressed on

Factory Clamp

Series
